Wolf Habitat

Detroit Zoo, Michigan, USA

Animal Area: 1.6 acres
Project Area: 2 acres
Animals: Wolves 1.2.0
Budget: $1.5 million

Existing cabin

This 2-acre revitalization project provides an engaging wolf exhibit with an immersive visitor experience. The exhibit will activate a currently underutilized portion of the zoo and become a new anchor point for the American Grasslands area. Besides focusing on innovative animal welfare and pleasant visitor experience of the animals and shared landscape, this project conserves resources by allowing adaptive reuse of existing holding facilities and a historical log cabin, and strategically repurposing excess soil from another project.

Meshed tree boxes are an innovative way to break up the rigidity of wood containment fences.
