

# Amazon Rainforest Building

Brandywine Zoo, Delaware, USA

**Area:** ~9,000sf

**Animal:** Macaw, Tamarins, Dwarf Caiman, Toucan, Saki Anteater, Capybara, Porcupine, Sloth, Coati, Jaguar, ...

**Budget:** \$10 million

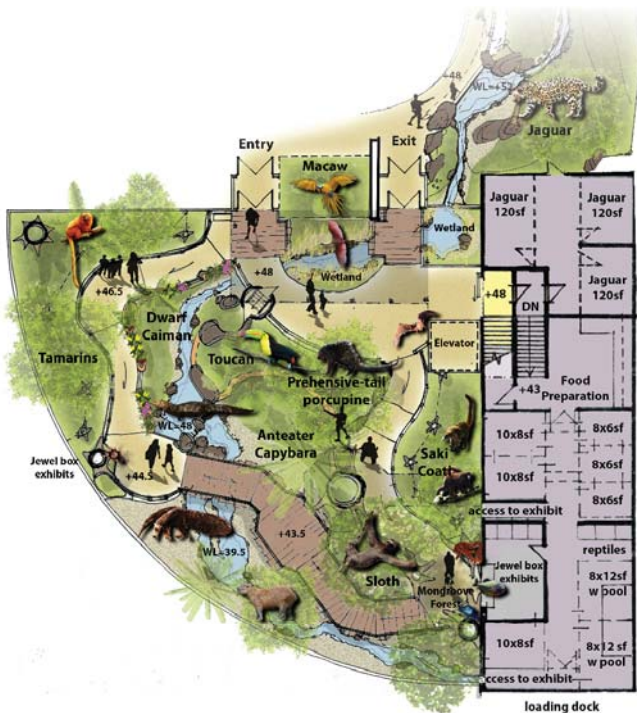

**Time frame:** March - May 2014

Bird's Eye View

## New Construction

Zoo Design Inc in collaboration with GWWO Architects developed a schematic design study for a new 9,000 square foot indoor rainforest habitat for the Brandywine Zoo. The new three story building features three different habitats: riverine, forest ground, and canopy level, each occupied by several mixed species exhibits and many free flying birds. Event space and an observation bridge on the third level will provide views overlooking the rainforest canopy, Brandywine Park, and Brandywine River, thus becoming a revenue generating venue.
